

## **Enj 5.2 Release Notes**

BISIL NA, Inc, Sep 30, 2005: BISIL takes a great pleasure in announcing the release of Enj version 5.2. This version release has been advanced to the meet the requirements of our clients.

- **Transact**

Inter instance transfer is the major enhancement in version 5.2 that adds to the data processing capability of Enj. The enhanced features now make it easier to manage a split process deployment across instances. This capability has opened up many more deployment options for our enterprise customers. This helps them manage their computing resources more efficiently and reduce deployment costs.

Transact module now enhances the transaction boundary feature. The other important features include improved functionality in activities without human intervention, dashboard enhancements like sort order, hide/ show fields and automatic refresh., and transaction flow after under multiple conditions. It now has an enhanced capability to handle task-specific engines.

- **Reports**

Enj Reports is being developed to handle more complex functionalities. The enhancements in 5.2 include bar-code features in reports to ensure security and easy identification by authorized users. Report download in HTML, XL and PDF formats, enhanced parameterization, more page setting options and nested reporting are some of the other areas in which the reporting functionality has been enhanced.

Search Document is a powerful feature in Quick Reports that allows users to search for document(s) based on a single value or a combination of values in the document.

- **Portal**

Enj Portal module has more security features for the protection of private domain pages and reports. The Menu Builder has more flexibility in terms of user interface.

- **Designer**

Item set navigation can now be controlled by use of simple buttons. The values from Master files can now be viewed and used as dynamic drop-down lists.

- **Admin**

Admin module now facilitates the transfer of defined processes and reports from one DB to another by way of scripting methodology.

- **Other**

The other enhancements include increased flexibility in Users and Roles definition, multi-selection of items and alignment in Modeler, catalog enhancements, and fine-tuning of GL reports.

### **About Enj**

BISIL's Enj enables organizations convert their every day business and functional activities into automated business processes. It also enables them to design associated documents, accept user input, forward the documents for information or approval to the concerned roles, store the accepted data in databases and retrieve it in the form of standard and user definable reports. Enj helps organizations orchestrate transaction from end to end. Enj also provides metrics necessary to monitor the processes the health, efficiency and effectiveness of business processes. In addition, Enj enables organizations maintain their active and dynamic portal through its Portal extension. Enj Portal makes it possible to integrate parts of the enterprise data warehouse with their corporate portals.
