Enj Ver 10.2

Bala Cynwyd, PA, January 2013 – Over the last few years many new features have been added to Enj which has made it feature-rich and one of the best BPM products. Enj also found itself being used in many domains, one of the biggest being Healthcare. While continuing with adding new features the focus has been shifting to making the product robust and efficient.

About Enj

Enj is a leading Business Process Management (BPM) product from BISIL that enables organizations to automate and manage business processes.

BISIL's Enj is a comprehensive Enterprise Business Process Management Platform that enables organizations to attain a higher level of agility and efficiency by helping automate processes as well as providing a system to govern and monitor the efficiency of the processes employed. Enj incorporates a full business process life cycle connecting "people with people", "systems with people" and "systems with systems". It combines capabilities of Work Flow, Transaction Management, and Document Management in one system that is browser-based, user friendly, scalable, and has a service oriented architecture (SOA).

Designer

Enhancement

- A new feature of Copy From and Copy To added so as to make it easier to populate the value from any other document in the same transaction flow prior to the existing document.

Fixes

- A fix for auto-complete activity after a decision box and before a collate activity was implemented.
- Handled spaces for the script panels script while creating the HTMLs.

Transact

Enhancement

- Routing to be based on attribute value made possible.

Reports

Enhancement

- Optimization in report fetching while in collapse mode.

Fixes

- Fixes for filter panel for report was attained.
- Concerns in parameter form fixed.
- There were issues in opening the report in full mode. Now the reports open correctly in full view mode with correct format and display of data.
- On refreshing the report the data is cleared from the report.
- Added currency converter for report columns.

Portal

Enhancement

- A new screen is introduced to take confirmation from user before changing the roles of the Portal.
- Custom border color added to widgets.
- Feature to add Header Images and footer for different roles introduced.
- Option to set padding if a column header is set and is aligned to left or right is available.
- A style sheets for Zoom full view icons is added.
- Added Setting for report to fill in entire widget width.
- New and more professional themes are added to existing portal themes.

Fixes

- Fixes to handle null conditions.
- While saving All Portals together, there were fixes required. Achieved the same by having to be able to successfully save and execute all the portals now.
- Handled the Widget Header display and saving concerns in-case of Portals.
