Enj Ver 10.2

Bala Cynwyd, PA, February 2013 – Over the last few years many new features have been added to Enj which has made it feature-rich and one of the best BPM products. Enj also found itself being used in many domains, one of the biggest being Healthcare. While continuing with adding new features the focus has been shifting to making the product robust and efficient.

About Enj

Enj is a leading Business Process Management (BPM) product from BISIL that enables organizations to automate and manage business processes.

BISIL's Enj is a comprehensive Enterprise Business Process Management Platform that enables organizations to attain a higher level of agility and efficiency by helping automate processes as well as providing a system to govern and monitor the efficiency of the processes employed. Enj incorporates a full business process life cycle connecting "people with people", "systems with people" and "systems with systems". It combines capabilities of Work Flow, Transaction Management, and Document Management in one system that is browser-based, user friendly, scalable, and has a service oriented architecture (SOA).

Transact

Fixes

- Changes done to open tabbed form in view mode only.
- Checks the data before uploading file for a process for handling any data upload related issues.
- Changes made to check if the attachment folder is created or not. This is for fixing issues where the attachment folder is not created and hence attachments were not saved.

Reports

Enhancement

- Enhanced the Filtering logic for reports.
- Added Image support for the title.
- Allowing the url to be dynamic by usage of pick url and static url by hard coding it in the report.

Fixes

- Fixes for filter report.
- Pagination in filter reports is feasible now.

Portal

Enhancement

- Allow accessing a document from URL in a portal.
- Added column padding for multicolumn layout in portal.

Fixes

- Issues with header panel handled
