

Bala Cynwyd, PA, Jan 8, 2007 (BISIL, NA) – Seasons Greetings from BISIL! The last quarter of 2006 kept us on our toes with many Enj deployments in fields as diverse as financial services, education and investment. Here are some representative deployments of Q4, 06.

About Enj

Enj is a leading Business Process Management (BPM) product from BISIL that enables organizations automate and manage business processes.

BISIL's Enj is a comprehensive Enterprise Business Process Management Platform that enables organizations to attain a higher level of agility and efficiency by helping automate processes as well as providing a system to govern and monitor the efficiency of the processes employed. Enj incorporates a full business process life-cycle connecting "people with people", "systems with people" and "systems with systems". It combines capabilities of Work Flow, Transaction Management, and Document Management in one system that is browser-based, user friendly, scalable, and has a service oriented architecture (SOA).

Enj in Compliance – GAAP translation

In Q3-06 BISIL announced the release of Enj-Consolidate for consolidation of books of accounts. In this quarter, BISIL announces the release of the GAAP translation framework. One of the requirements of a corporation prior to consolidating its books of accounts is for it to ensure that the books of its entities operating in different geographies that are currently in the local GAAP are converted to and drawn up in the reporting GAAP.

The Enj GAAP translation framework provides the necessary infrastructure to accept accounting data feed, and specify & perform the necessary translation required to convert the accounting statements from the operating GAAP to the reporting GAAP.

Enj GAAP translation framework provides full traceability and accountability through comprehensive audit trails.

Enj in Education

Enj continues to build on its previous implementations in the education vertical. It has been used in Q4-06 to deploy solutions that help streamline various Enrollment, Registration and Administrative procedures for a market leader in the field of professional training.

In this specific case, an Enj based Document Management solution comprised of steps starting with acceptance of enrollment related information from the students online; applying specialized fee structures based on student's category; segregating personal, course schedule, examination & payment related information and "attaching" it to the appropriate forms and finally emailing the forms to the students for further action with correct instructions.

The administrative part of these processes ensured completion and tracking of follow-up activities based on the data conditions.

Enj in Investment Banking

Enj is being used to configure processes that are required to manage of the investment procedures for High Net Worth Individuals and Corporate entities, i.e. those with investments exceeding US\$ 1 million. The solution configured on Enj helps manage all the steps and collaborative activities that take place between Marketing and back office.

More details on Enj at www.enjbiz.com

The solution covers various activities that start in the front office and go all the way to the back office, e.g. in the areas of New accounts; ensuring that all agreements are put in place, compliance with statutory requirements like those for KYC and AML; regular client communication; provision of an interactive client portal.

Enj in Health Care

Enj is being used by two large healthcare organizations to put together a referral management solution. This solution helps manage the collaborative processes around referrals that are made from one of these healthcare organizations to the other.

This solution takes care of both clinical and revenue cycle requirements. This is being put together to manage a set of processes to handle a referral transaction through its entire life from the referral through consult, documentation, billing and payment.

This solution leverages all the aspects of Enj – e.g. Directory integration; Process management; Document Management; Collaboration; Portal deployment.

Product Enhancements

The engineering team of Enj continued with its set of releases with several important enhancements. Some of these are listed below:

- Enhancements to Enj – Ports: SOA implementation
- Enj – Portal: Added features to make it easier for 3rd party applications to tie into Enj. Compliance of more parts of the portal with JSR 168 requirements.
- Calendar and scheduling – Enhanced rules for governing synchronous tasks in Enj.
- Rules abstraction – Better interfaces for rules abstraction and specification; Integration extended to reports.
- API set expansion – API set of Enj has been expanded to give more enhanced control and integration to 3rd party applications.
- Enj Reports – Feature set expansion – Matrix report optimization.
- Document Management – Functionality added to make it easy to manage documents.
- Modeler – Additional predefined objects made available e.g. for activities like 3-way hard and soft match.
